# Domes and Windows

## EFFECTIVE CLEANING SOLUTIONS

Proper cleaning procedures and use of chemically-compatible cleaners are important in maintaining the performance of acrylic and polycarbonate windows and domes. - Never scrape with razor blades or other sharp instruments. - Never use benzene, leaded gasoline, acetone, or carbon tetrachloride. - Do not clean in hot sun or elevated temperatures.

List of Compatible Cleaning Agents - Windex®, Mr. Clean®, Fantastic®, Joy®, Formula 409® - Solvents – Kerosene, Naptha (VM&P grade), Neleco-Placer, Turco 5042 - Alcohols - Methanol, Isopropyl

CLEANING INSTRUCTIONS - Wash windows and domes with mild soap or detergent and luke-warm water. - Using a SOFT cloth or sponge, gently wash the sheet to loosen dirt and grime. - DO NOT SCRUB with anything abrasive. - Rinse well with clear water and dry thoroughly with a chamois or dry cloth to prevent spotting.

SCRATCH REMOVAL - Hairline scratches and minor abrasions can be removed or minimized by using a mild automobile polish. Test a small, inconspicuous area first before using in larger areas. Be sure to buy a brand that both fills and polishes.
